

CS181 - AICT

LAB # 01

Virtual Machines Installation

—

Student Name: Athar Imran

Student ID: 2604277

Assignment Date: 9th September, 2026

Assignment done: 13th September, 2026

Due Date: 16th September, 2026

Downloading VMware:

VMware is an engine used to run Virtual Machines. It can be downloaded from the official site. I have my VMware setup:

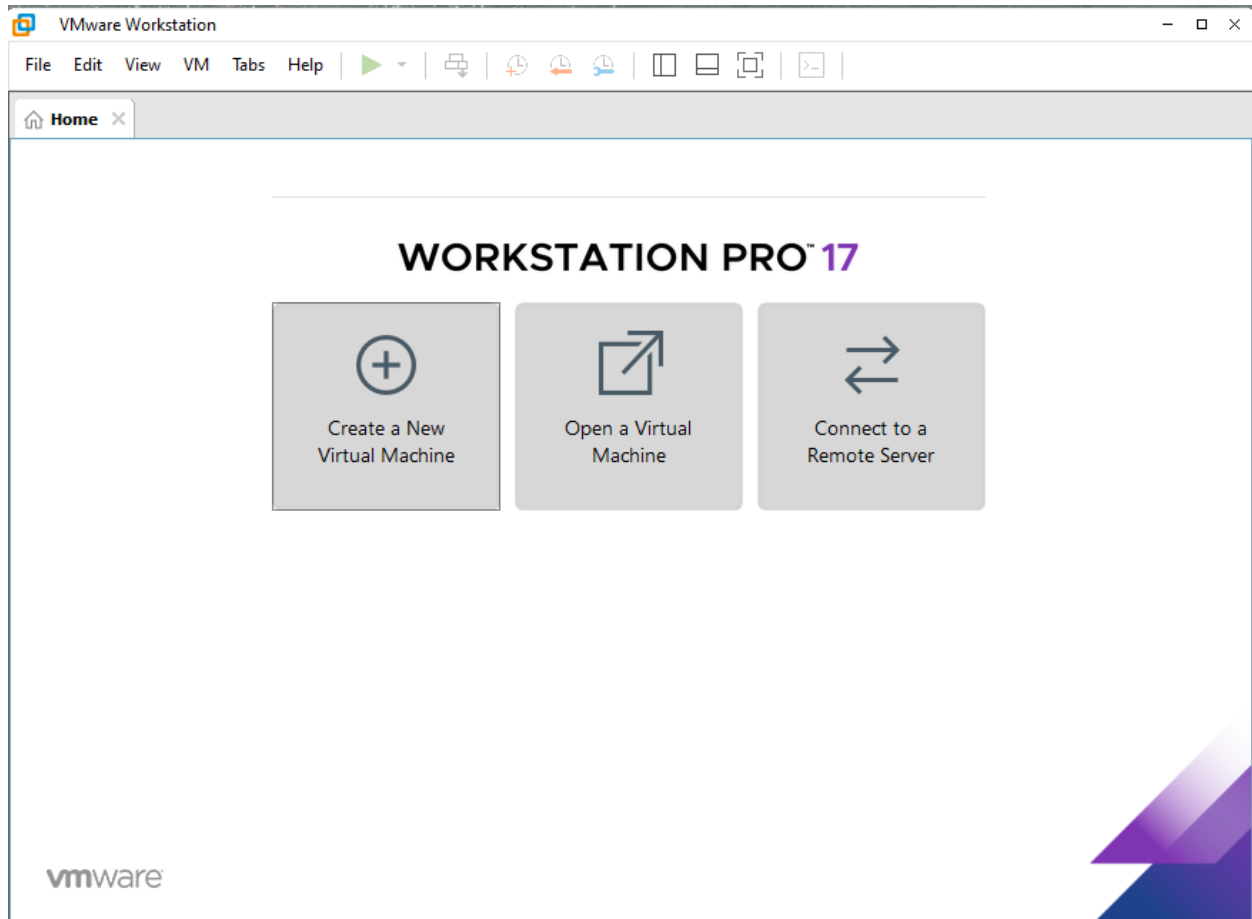

Figure 1 - VMware main screen

Setting up Windows 10 VM:

I created the Windows 10 VM using an official image provided by Microsoft. After iso file of Windows 10 is downloaded, I clicked “Create a new VM” in VMware:

I selected the downloaded windows iso file when prompted.

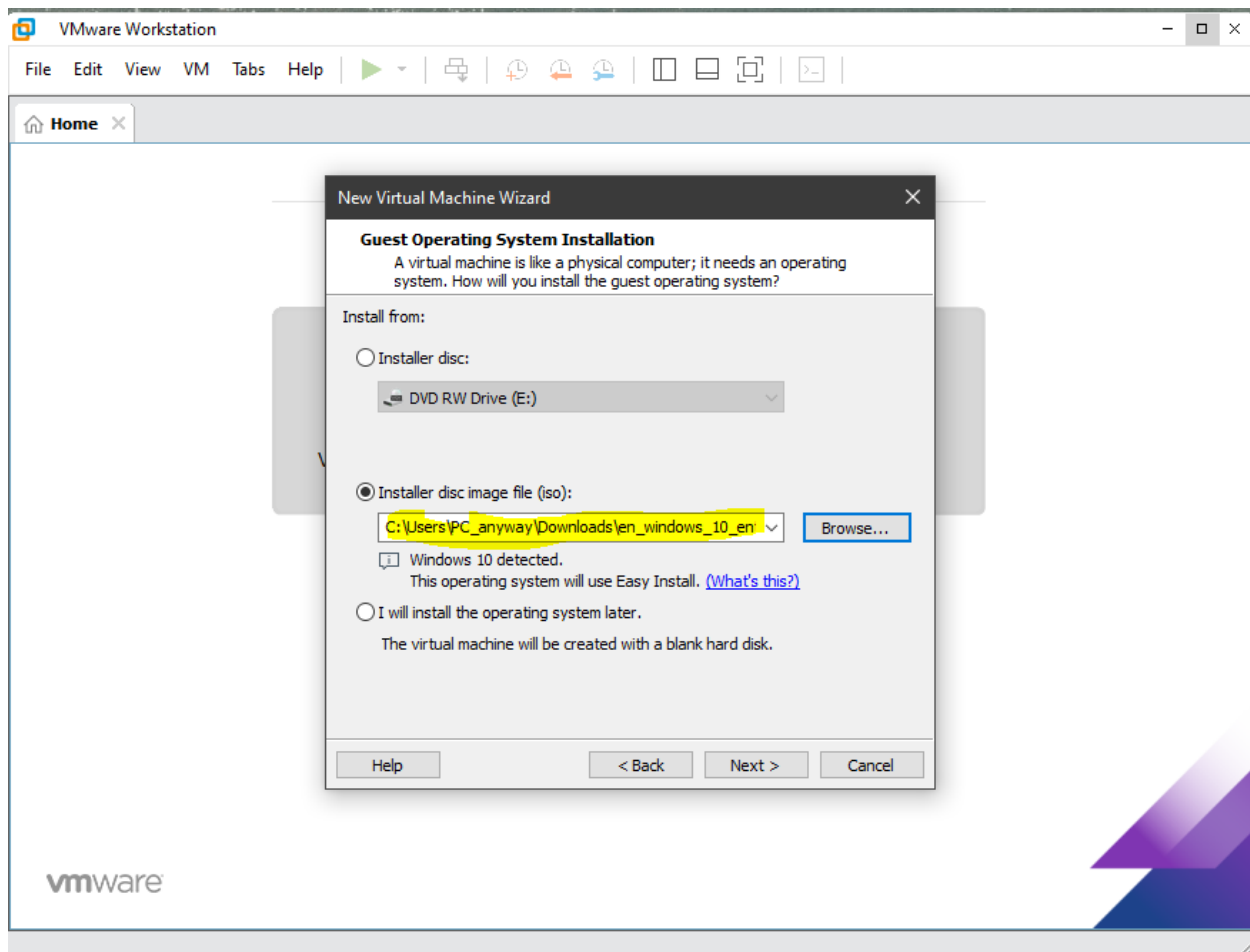

Figure 2 - Location for Windows VM

Next, it asks for the location to save the VM. Then it prompts us to allocate the maximum disk space:

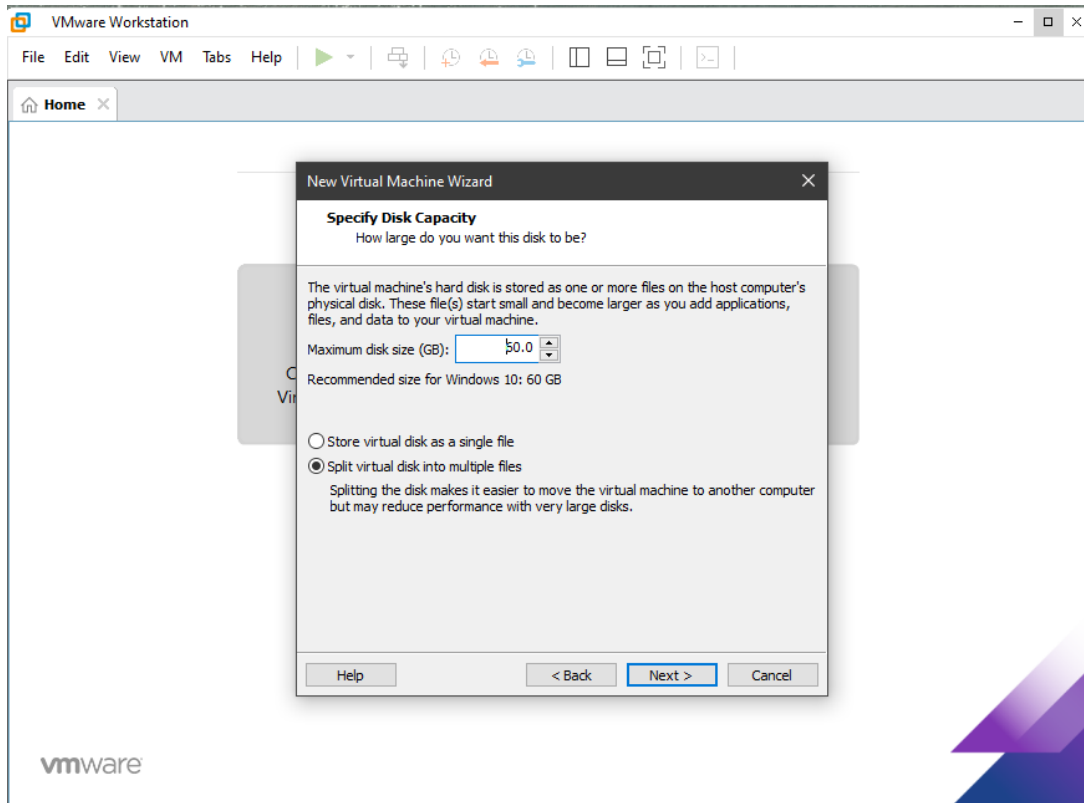

Figure 3 - Allocating disk space

It shows us the summary of the VM to be created:

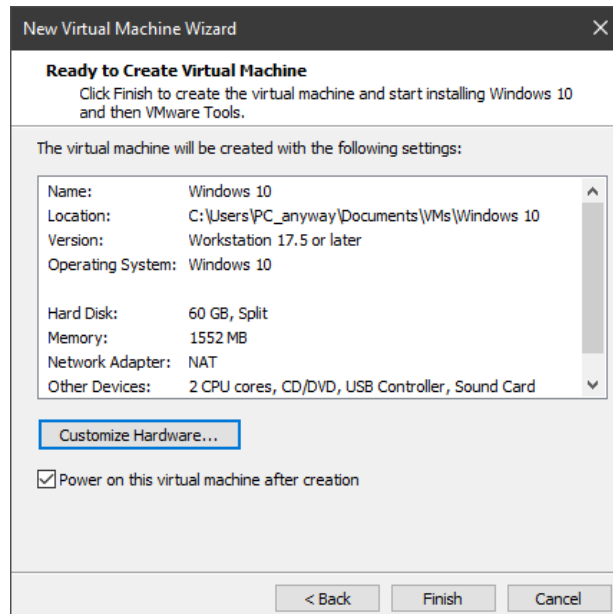

Figure 4 - Summary of Windows VM

Proceed with it if everything is fine. It will finally start the installation of Windows.

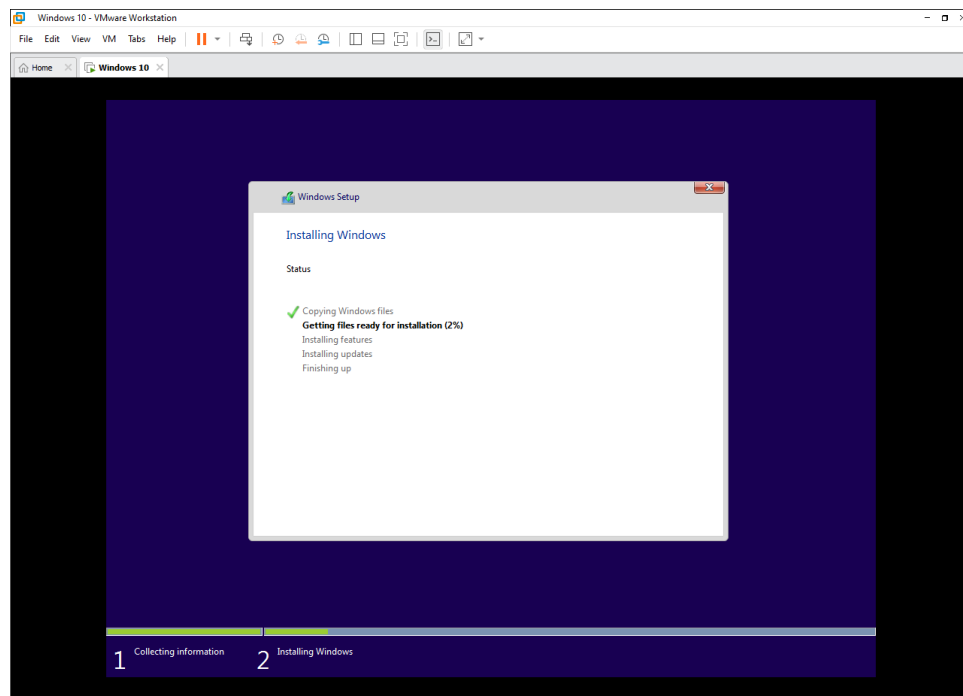

Figure 5 - Windows under installation

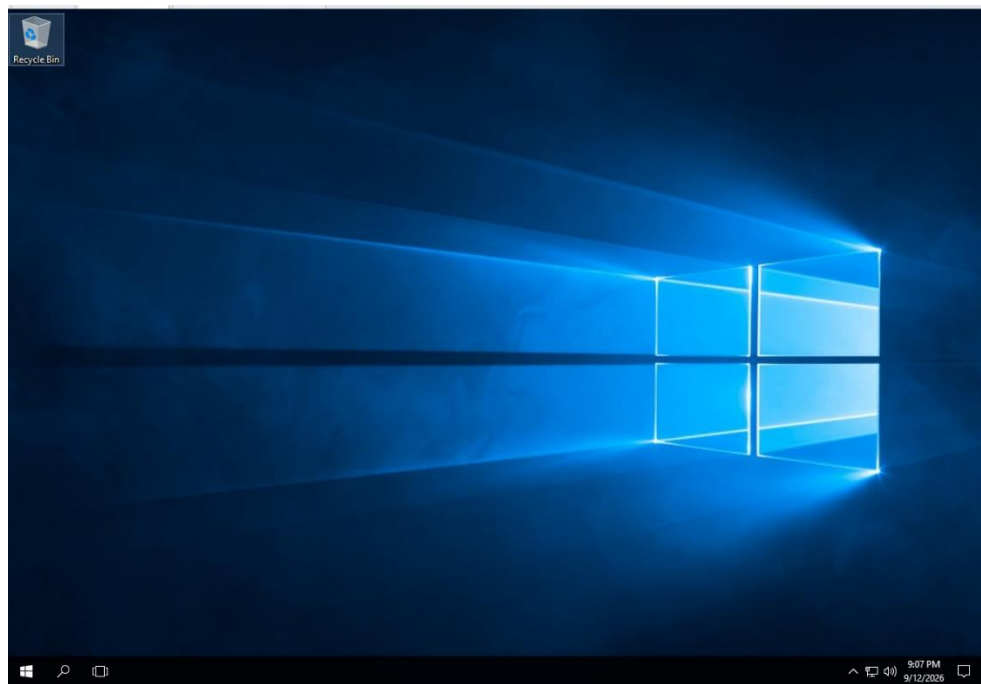

Figure 6 - Windows 10 VM

Setting up Kali Linux:

Kali Linux is the most used OS in the field of Cybersecurity. In this lab, we will also set up Kali Linux. On the official site, we have two options to set up Kali Linux.

1. Using .iso
2. Using Installer Image

I have used the Installer Image to set up Kali Linux. After downloading the VMware Kali Linux Image, click “Open a VM” in VMware and select the .vmx file downloaded:

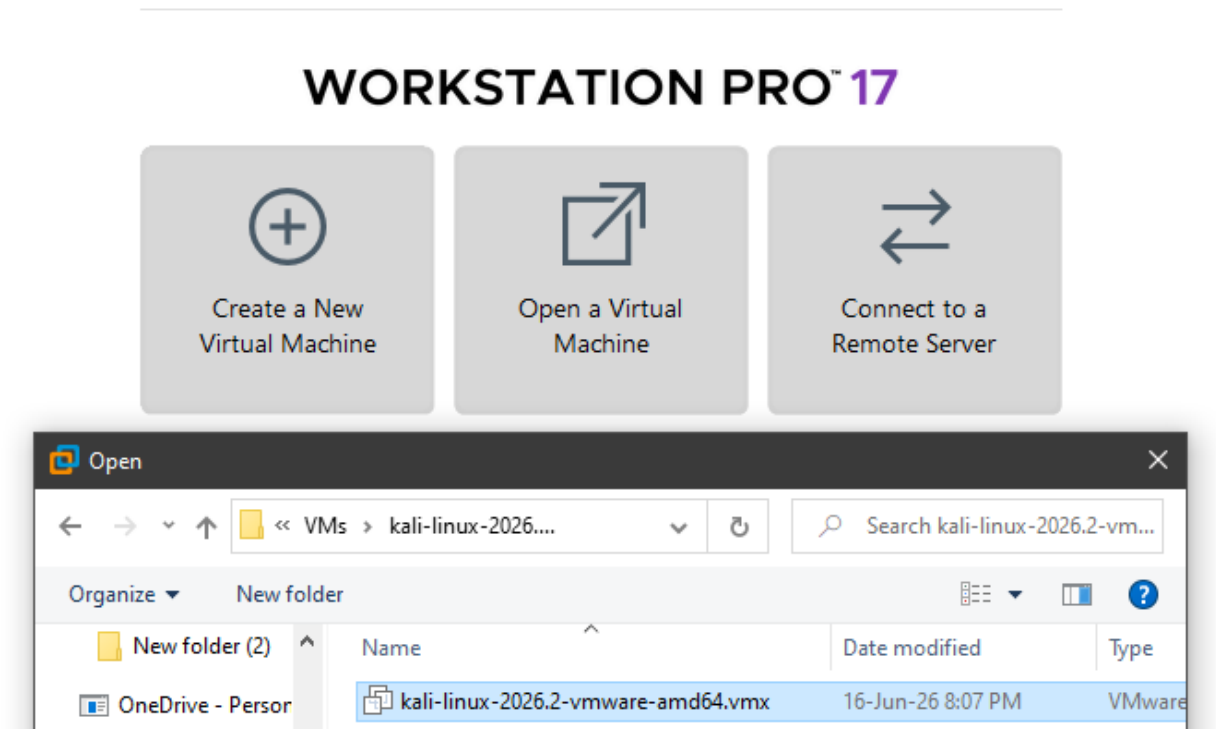

Figure 7 - Opening Kali Linux VM

It will display the menu of the Kali Linux VM:

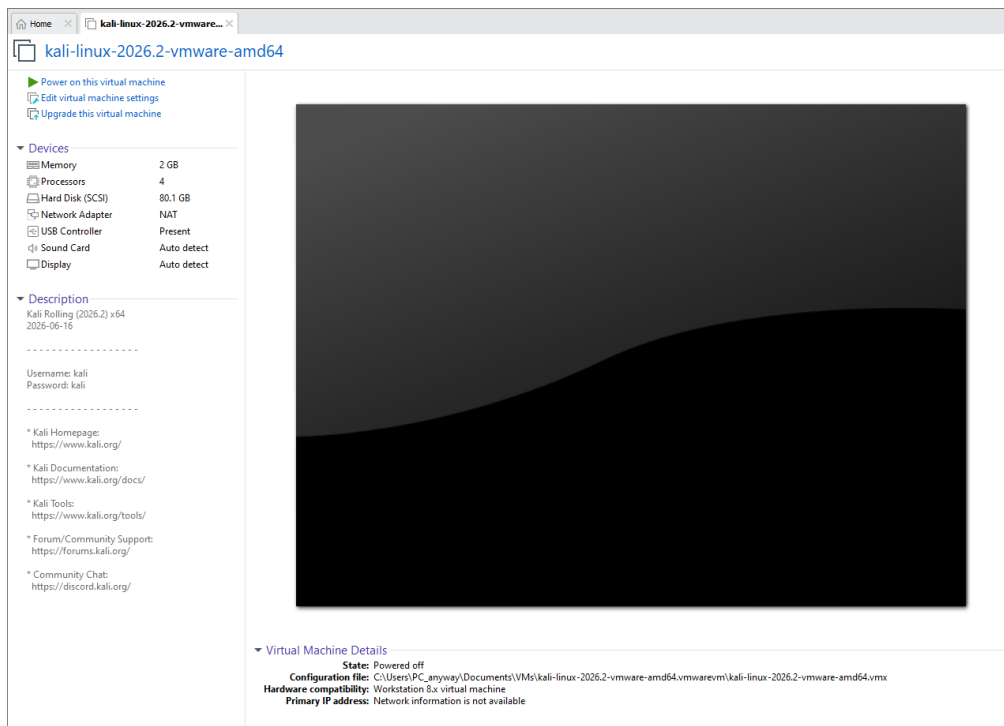

Figure 8 - Kali Linux VM Summary

Next, it will ask for the credentials; that is, kali: kali.

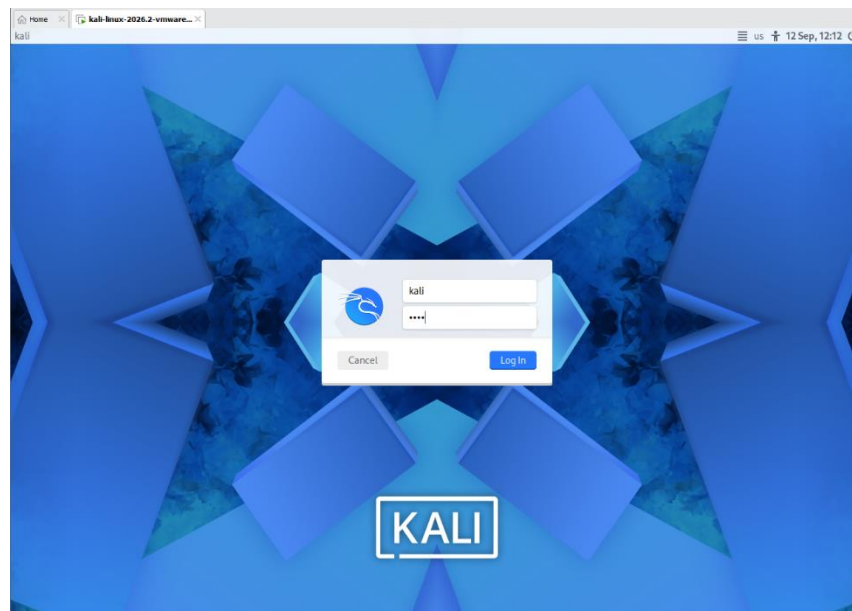

Figure 9 - Kali Linux Credentials

And finally:
