Student Name: Athar Imran

Student ID: 2604277

Assignment Date: 11 Nov, 2026

Assignment done: 11 Nov, 2026

Due Date: 11 Nov, 2026

ATHAR IMRAN

CYBERSECURITY ANALYST | SECURITY OPERATIONS | INCIDENT RESPONSE

Islamabad/Rawalpindi, Pakistan | +92 308 519 0016 | atharimran728@gmail.com

Portfolio | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Cybersecurity analyst with hands-on experience across security operations, network security, web application security, and incident response through practical fellowships, internships, structured training, and security projects. Skilled in security event analysis, alert triage, log investigation, threat detection, IDS/IPS monitoring, vulnerability testing, and incident documentation using Wazuh, Zeek, Suricata, Snort, Burp Suite, Logstash, and Python. Experienced in analysing network and endpoint telemetry, validating security detections, investigating suspicious activity, and translating findings into structured security reports. Holds ISC2 Certified in Cybersecurity (CC) with a practical focus on identifying, investigating, and documenting security threats.

EXPERIENCE

Cybersecurity & AI Fellow

BUILDABLES | Aug 2025 – Nov 2025

- Investigated simulated security events by triaging alerts, analysing logs, and validating detections within a SOC-style training environment.
- Improved investigation context by reviewing network telemetry and simulated adversary activity to distinguish relevant events from potential false positives.
- Strengthened incident documentation by recording investigation findings and applying structured workflows informed by the NIST Cybersecurity Framework.

Web Security Intern

DEVELOPERSHUB | Jun 2025 – Jul 2025

- Identified 8+ web security findings involving SQL injection, XSS, and CSRF through manual testing of vulnerable applications.
- Validated vulnerabilities using Burp Suite and manual testing techniques, establishing supporting evidence for security reports.
- Produced vulnerability documentation with technical findings, potential impact, and remediation guidance aligned with OWASP Top 10 concepts.

Cybersecurity Fellow

BYTEWISE LTD | Jun 2024 – Sep 2024

- Analysed security alerts, system logs, and simulated attack activity through blue-team labs and CTF-based exercises.
- Investigated suspicious indicators in controlled security scenarios to develop practical threat identification and incident response skills.
- Applied defensive security techniques across firewall, IDS/IPS, networking, and security monitoring exercises.

CERTIFICATIONS & TRAINING

- ISC2 Certified in Cybersecurity (CC) – ISC2 | 2025
- Certified Phishing Prevention Specialist (CPPS) – Hack & Fix | 2025
- Google Cybersecurity Professional Certificate – Google | 2025
- Student SOC Program Foundations Training Certificate – Microsoft | 2025
- Cisco Cybersecurity Analyst Learning Pathway – Cisco | 2025
- Cybersecurity Hackathon & Workshop – Government of Pakistan | 2024
- A+, Network+, Security+ Exam Preparation – Professor Messer | 2023

PROJECTS

IRIScribe - Incident Response Insight System

Sep 2025 | Python, Suricata

- Automated structured incident-response reporting by processing Suricata eve.json security events with a Python-based tool.
- Reduced manual documentation effort by transforming raw security events into organised investigation reports.

Log Enrichment & Threat-Aware GeoIP Pipeline

Oct 2025 | Logstash

- Added geographic and threat context to raw IP-based log events through a Logstash enrichment pipeline.
- Improved investigation context by transforming raw events into enriched security data suitable for analysis.

Insider Threat Lateral Movement Detection

Aug 2025 | Zeek, NetworkMiner

- Detected and investigated simulated lateral movement by correlating Zeek network logs with NetworkMiner artifacts.
- Reconstructed relevant attack paths and documented indicators observed during the controlled multi-host investigation.

Wazuh SIEM Deployment & Integration

Sep 2024 | Wazuh

- Centralised endpoint and system telemetry by configuring Wazuh log ingestion, alerts, and monitoring dashboards.
- Investigated generated security events to practise SIEM-based monitoring and alert analysis.

TECHNICAL SKILLS

Security Operations

SIEM, alert triage, log analysis, incident investigation, incident documentation, detection validation, false-positive analysis.

Security Tools

Wazuh, Zeek, Suricata, Snort, Burp Suite, NetworkMiner, Logstash.

Security Domains

Network Security, IDS/IPS, Web Application Security, Vulnerability Assessment, Threat Detection, Incident Response, Security Monitoring.

Web Security

OWASP Top 10, SQL Injection, XSS, CSRF, manual security testing.

Programming & Systems

Python, JSON, Linux, Windows, networking fundamentals, security log processing.

EDUCATION

Bachelor of Science in Embedded Systems Security

Air University | Islamabad | 2026 – Present

Intermediate in Computer Science

502 Model College | Rawalpindi | 2026

Matriculation

Allied School | Rawalpindi | 2024
